

Unit 3

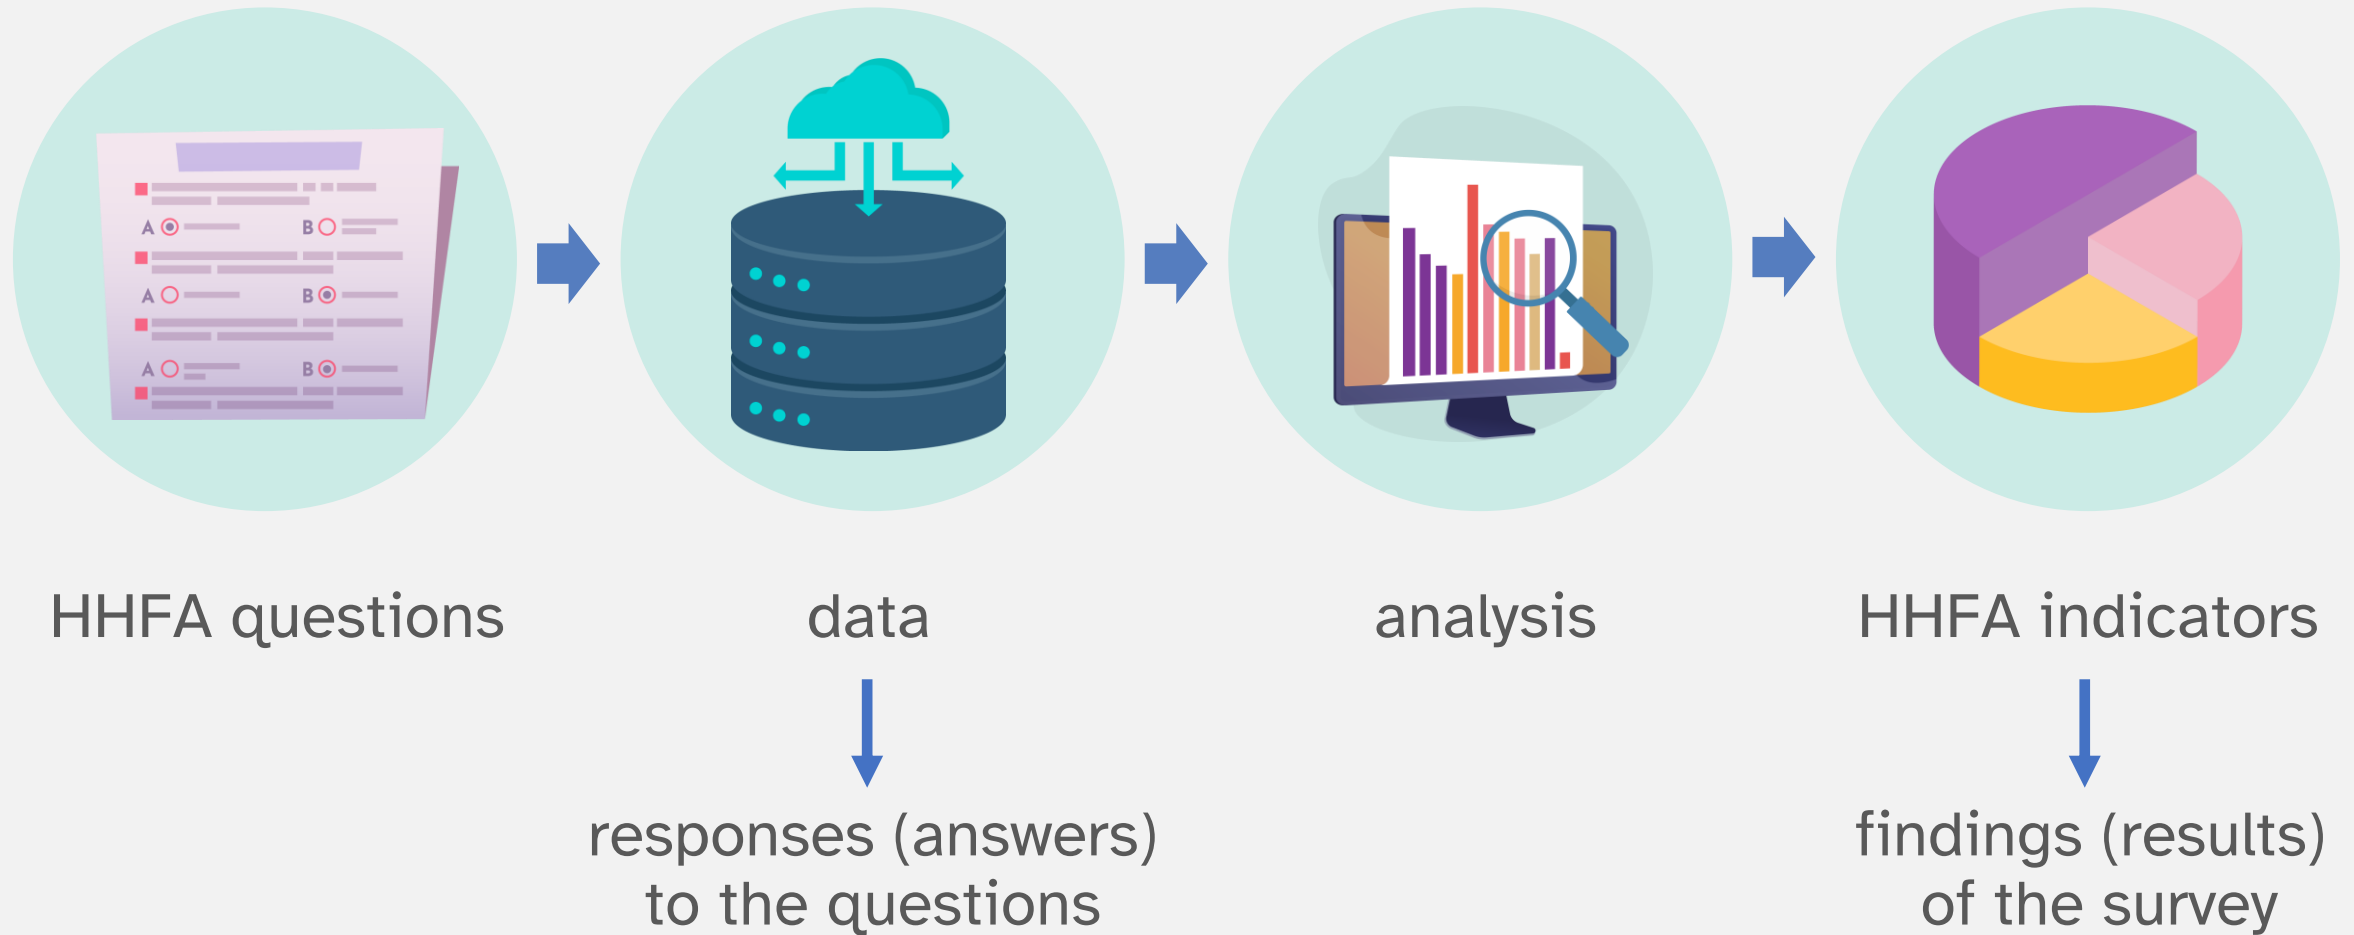

How HHFA tools work together

By the end of this unit, you will:

- outline how different HHFA tools work together in the survey process
- explain how the indicator inventory platform differs from the data analysis platform

Survey questions to indicators

HHFA tools and process

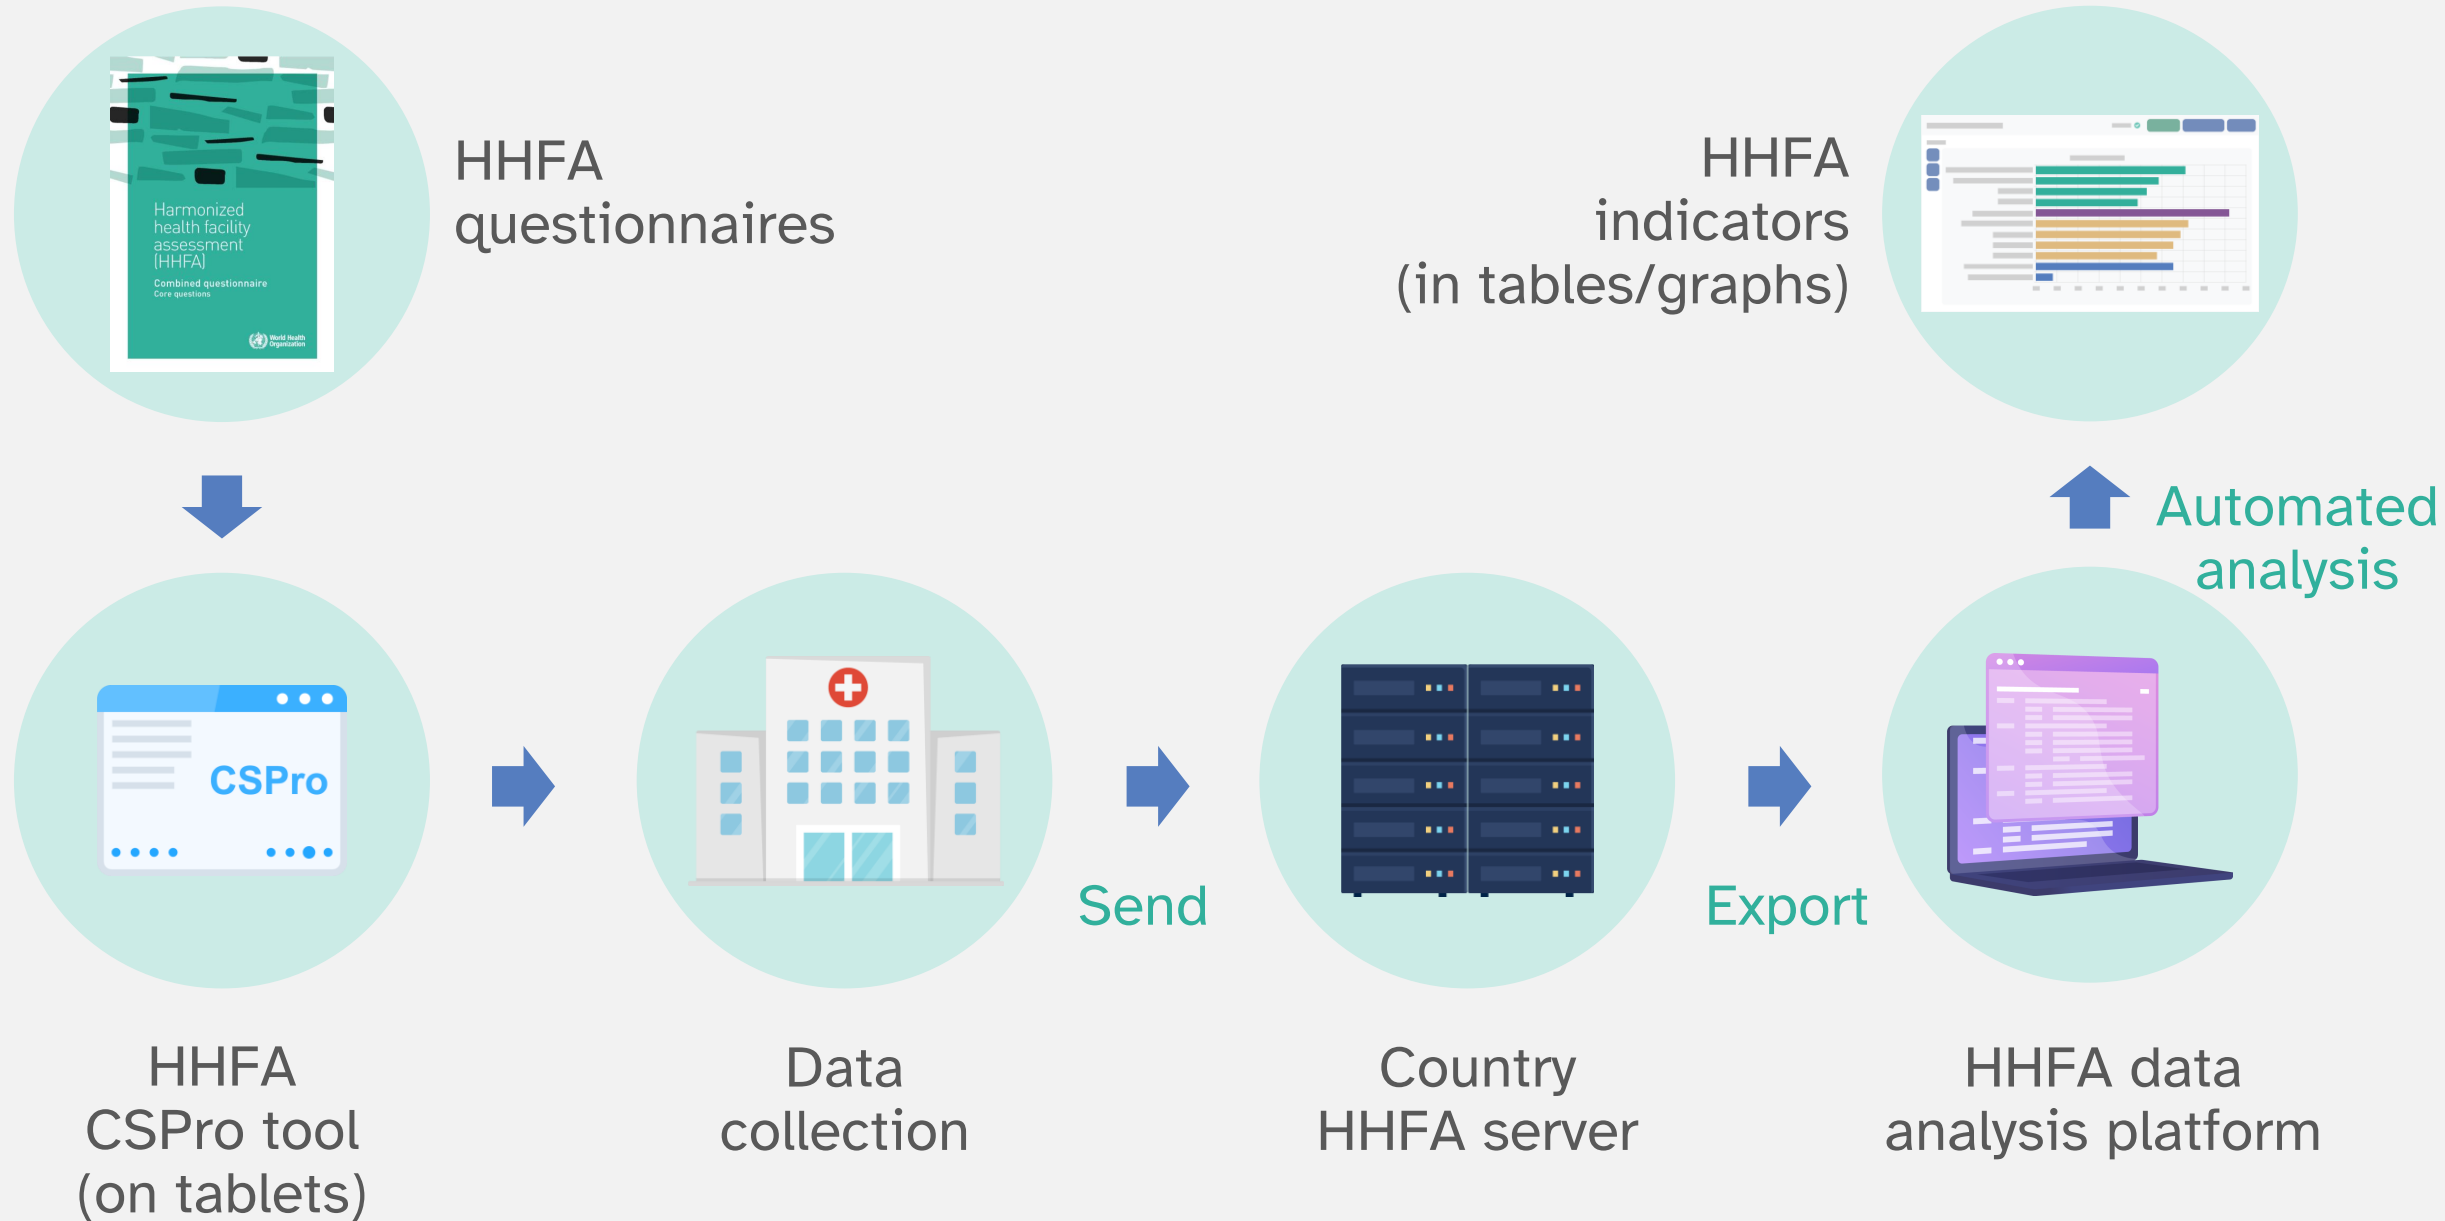

HHFA resource package: <https://www.who.int/data/data-collection-tools/harmonized-health-facility-assessment/introduction>

The HHFA resource package contains various tools to support the process of getting from questions to indicators.

- contains the standard HHFA indicators, based on the standard HHFA questions

HHFA online indicator inventory platform

- The indicator inventory platform is a **standard reference tool**
- Allows all the standard HHFA indicators to be seen online anytime
- A country **cannot adapt** the online indicator inventory

HHFA online indicator inventory platform

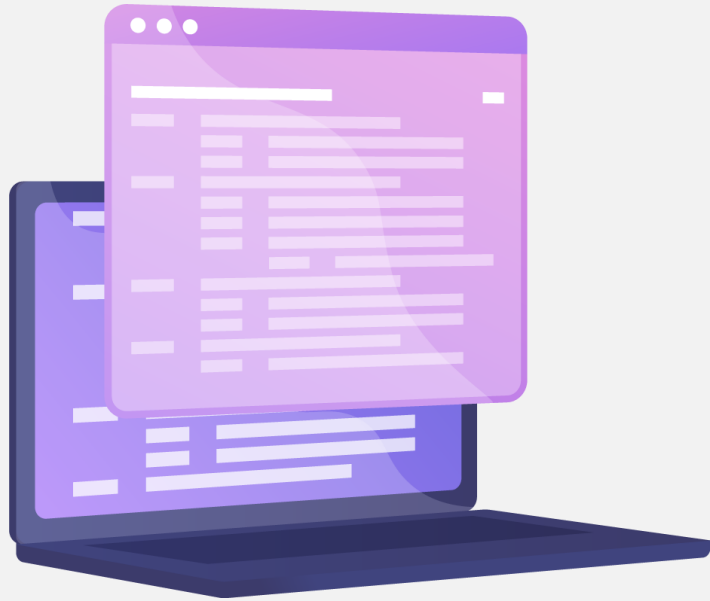

Countries use the indicator inventory platform to:

- see the indicators that will be produced by the data analysis platform
- understand how the indicators are organized
- see the questions linked to each indicator

The country questionnaire adaptation process should start with a review of the indicator inventory.

HHFA data analysis platform

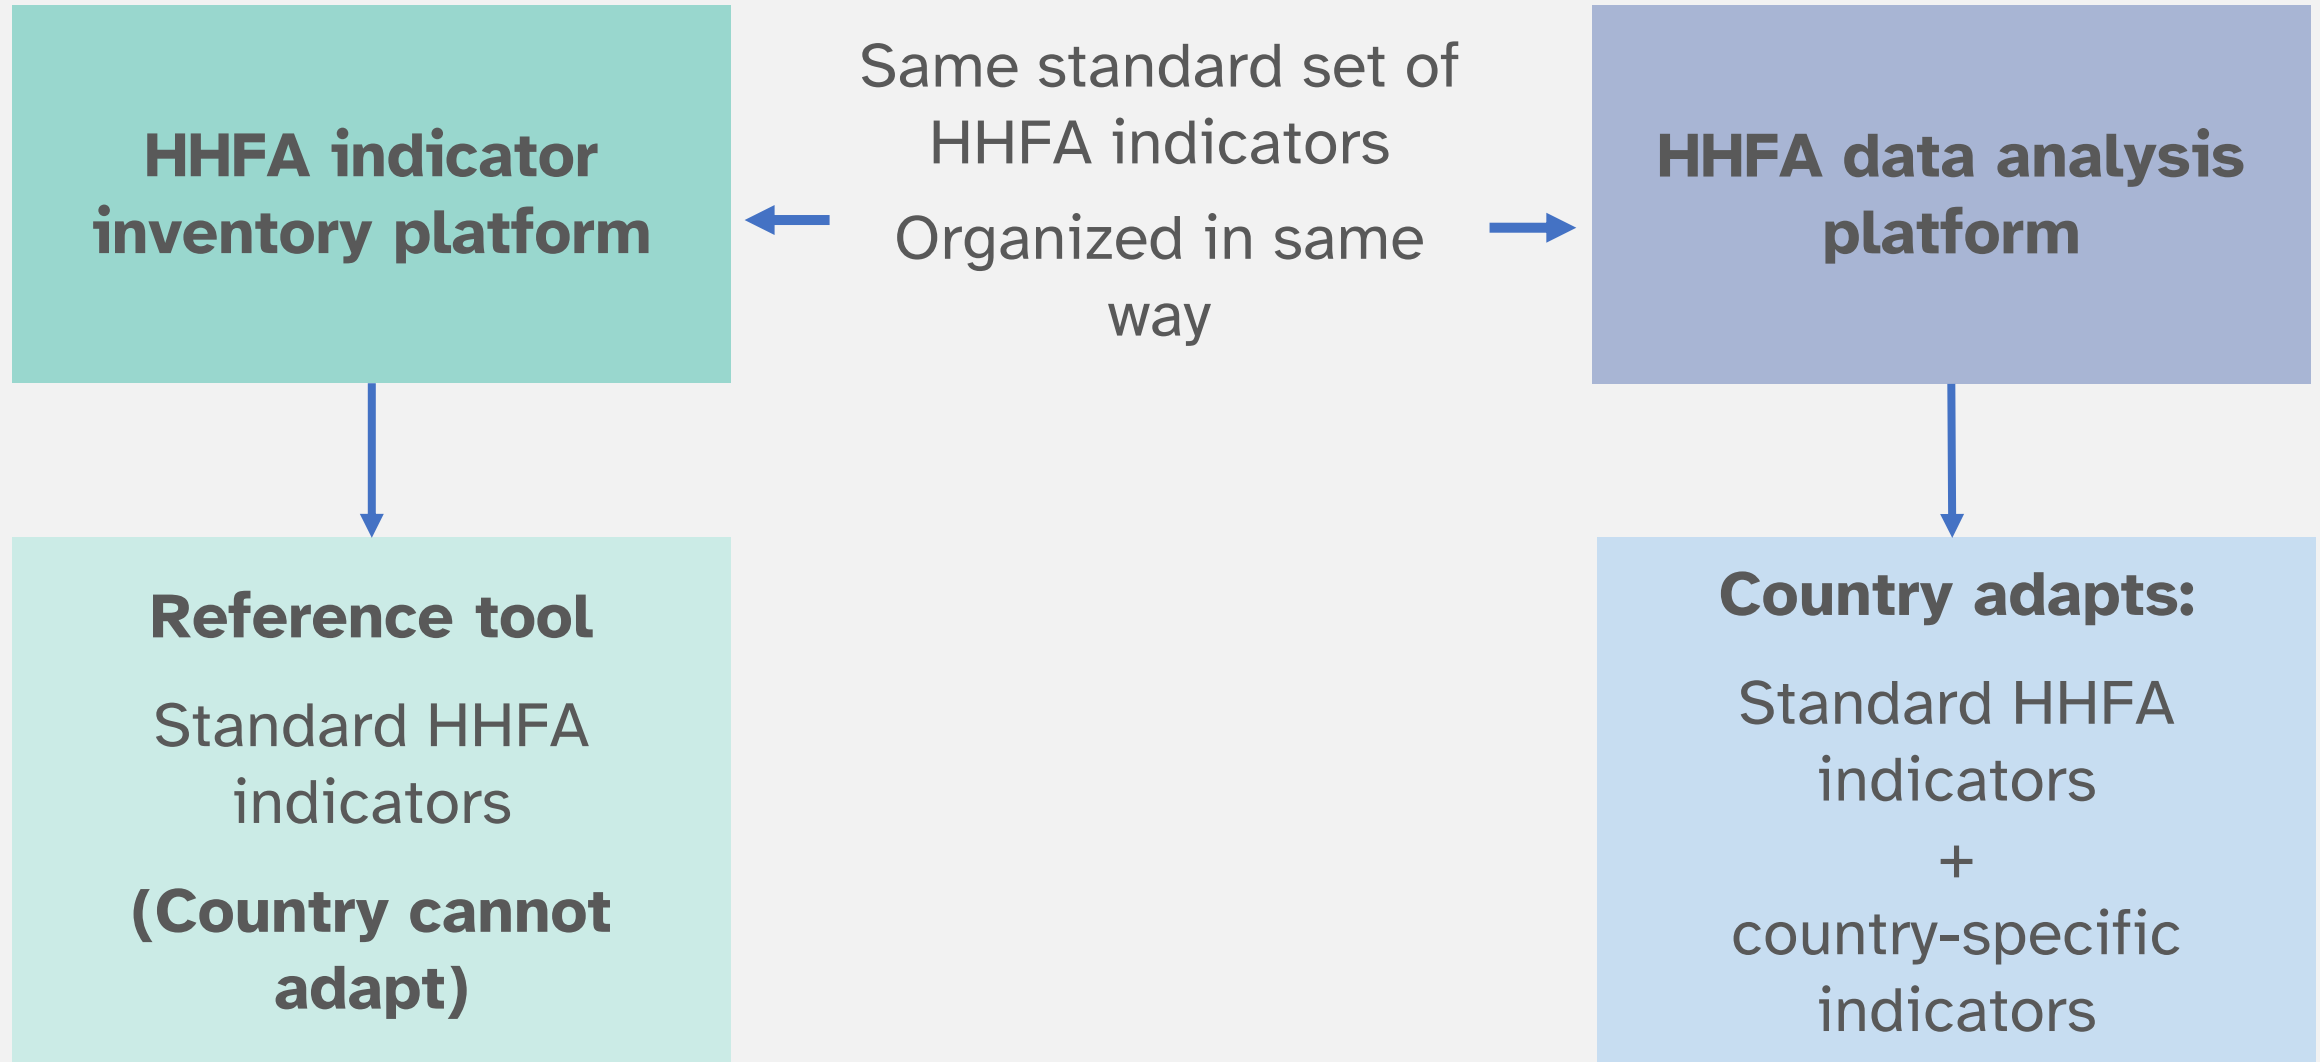

The data analysis platform:

- is accessed online
- allows creation of a country-specific version
- is adapted for each country context
- contains standard HHFA indicators
- contains any country specific indicators
